

Know Your Body: Testing for testicular cancer

Tests for testicular cancer

tests

Your doctor may refer you for further testing after your doctors appointment. This normally happens within 2 weeks.

Some of the tests you may have are described below.

ultrasound

Scrotal ultrasound

A scrotal ultrasound scan is where a picture is taken of the inside of your testicle.

blood tests

Blood Tests

Rarely, the doctor may ask for you to have some blood tests.

CT scan

CT Scan

A pelvic CT scan can be used to confirm what stage the cancer is in and to see if the cancer has spread.

Version 2: Information was correct as of 2 December 2024

The health information in these materials relating to testicular cancer awareness is provided by **Orchid**. References available on request.
